Next: What Drives Attrition →

Employees	Leavers	Attrition Rate	Voluntary Rate	Avg Tenure (years)
311	104	33.4%	28.3%	3.46

Which departments lose the most people?

Why do people leave?

Key Findings:

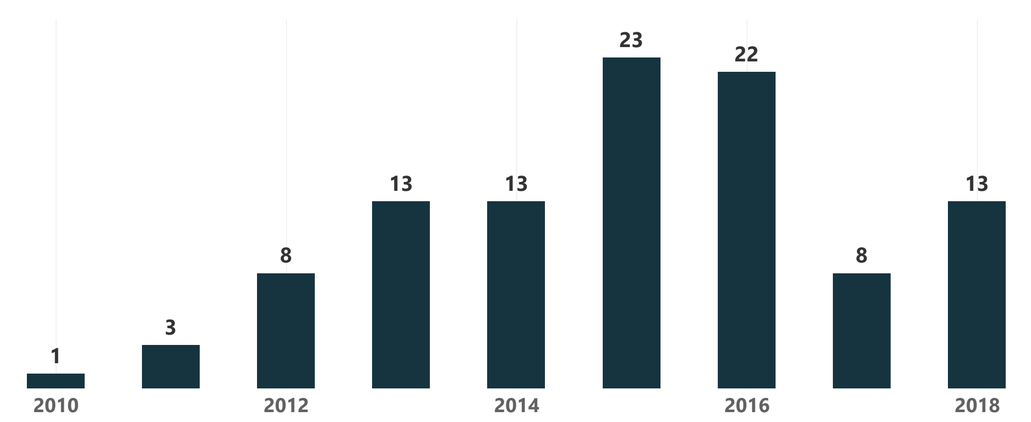

• Attrition is high and mostly voluntary: 104 of 311 employees left (33.4%), 88 of them voluntarily (28.3%). This is cumulative across 2010-2018, not an annual rate, so it should not be compared directly with annual benchmarks. Recommendation: start tracking attrition per year.

• Production drives the volume: 83 of the 104 leavers (80%) came from Production, which also has the highest rate among the larger departments (39.7%). Software Engineering (36.4%) and Admin Offices (22.2%) look high but rest on very few employees (4 of 11 and 2 of 9). Recommendation: focus the retention review on Production first (workload, shifts, pay).

• Most stated reasons are within the company's control: another position (20), unhappy (14), more money (11), career change (9) and hours (8) account for 62 of 104 exits. Another position may overlap with pay. Recommendation: standardize exit interview reasons to separate pay from career growth.

• Exits peaked in 2015-2016 (23 and 22), but these are counts, not rates, and 2018 is a partial year. Recommendation: add yearly headcount to compare rates.

← Back: Attrition Overview

Do leavers differ in pay and engagement?

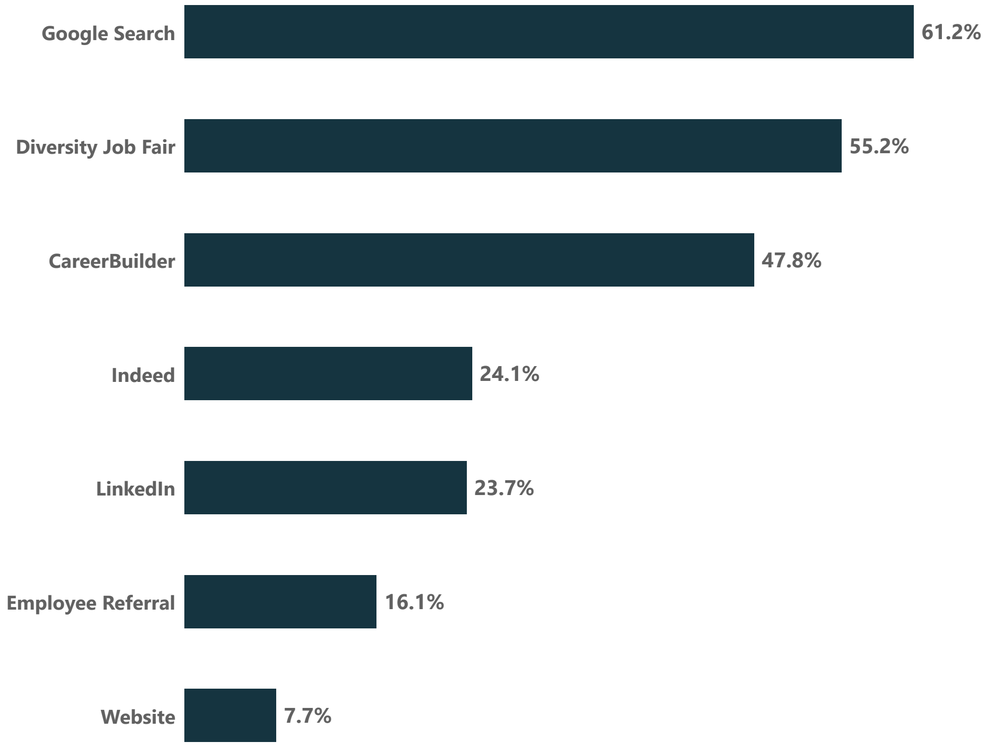

EmploymentStatus	Avg Salary	Avg Engagement	Avg Satisfaction
Active	70,694.03	4.12	3.89
Terminated for Cause	75,264.88	3.60	3.81
Voluntarily Terminated	63,949.20	4.18	3.90
Total	**69,020.68**	**4.11**	**3.89**

Is performance related to leaving?

Which hiring sources have the highest attrition?

Only sources with 5+ employees are shown; smaller groups give unreliable rates.

Key Findings:

• Pay, not engagement, may be a factor: employees who left voluntarily earned about 9.5% less on average (63,949 vs 70,694 for active staff), while engagement (4.18 vs 4.12) and satisfaction (3.90 vs 3.89) were almost identical. Caveat: averages mix departments and roles. Recommendation: compare pay within the same role before drawing conclusions, and benchmark Production salaries against the market.

• Attrition falls as performance rises (PIP 38.5%, Fully Meets 33.3%, Exceeds 21.6%), but still 1 in 5 top performers left, and most leavers (81 of 104) were rated Fully Meets, the core workforce. PIP (13 employees) and Needs Improvement (18) are very small groups. Recommendation: build retention actions (career path, recognition) for Exceeds and Fully Meets staff.

• Referrals retain best: Employee Referral (16.1%) and Website (7.7%) have low attrition, while Google Search (61.2%), Diversity Job Fair (55.2%) and CareerBuilder (47.8%) are highest. Only sources with 5+ employees are shown. Recommendation: invest more in referrals, and review onboarding and support for hires from high-attrition channels rather than cutting them.
